## EXPLANATORY NOTES

**1. New or Recent Changes in Presentation***(a) Arising from war conditions*

In general the mortality of civilians is distinguished from that of non-civilians (see sections 2 and 3 below).

Tables 14 and 16 (Infant Mortality extended analyses) have been suspended.

Table 17. Areal death rate comparability factors have been suspended on account of the unsettlement of the sex age composition of local populations caused by evacuation and other War transfers of population.

Table 24. The age groups identified have been reduced from 11 to 6.

*(b) Population Statistics Act 1938*

Tables 19 and 19A. The marital condition of deceased males is ascertained under the Act and analysis by condition and age is now extended to cover both sexes.

*(c) Revision of Causes of Death classification*

From 1940 inclusive causes of death are classified in accordance with the Fifth Revision (1938) of the International List.\* Changes in the method of selection between jointly stated causes have been introduced at the same time (see section 4 below).

Tables 25(b) and (c) have been added showing occupational deaths and deaths of non-civilians from violent causes.

*(d) Notification of Infectious Diseases*

Tables 26-29. Notifications have been extended to include Measles and Whooping Cough and these diseases are now included in the Tables, the few cases of Smallpox being recorded in Table 29 in footnotes.

**2. Populations**

The national and local estimates of civilian resident populations in 1940 (Tables 1, 2 and 17) are derived from the National Register enumeration of 29th September, 1939 after allowance for subsequent births, civilian deaths, migration and intake into the Armed Forces obtained from the National Register and other sources of information. The national estimate of the total population including the Armed Forces at home and overseas is given in the footnote to Table 1; it cannot be apportioned amongst areas within the country.

**3. Deaths**

Except in Table 23, the deaths recorded are those registered in the calendar period, the time lag between date of occurrence and date of registration being usually only a day or two. In Table 23, the deaths are classified by calendar month of occurrence.

Except in Tables 3, 4, 21A and 25(c) the deaths recorded are those of civilians only. In Tables 21A and 25(c) non-civilian deaths are recorded separately and in Tables 3 and 4 the numbers refer to civilian and non-civilian deaths combined.

Deaths of civilians are classified according to the area of residence of the deceased, the following conventions being adopted in the special circumstances (evacuation, industry transfers, etc.) of the war period, viz. (a) where a temporary address was recorded as well as a former permanent address the death was assigned to the area of the temporary address and (b) where the death occurred in a non-evacuation area (otherwise than in an institution) and only one address was recorded which was in an evacuation area the death was assigned to the non-evacuation area.

Civilian War Deaths identified in Table 17 (col. 13) are those assigned to cause No. 197 consisting mainly of deaths registered under the special emergency procedure applicable to deaths due to war operations.

Non-civilian deaths are not classified by areas.

**4. Causes of Death**

The classification of causes of death is that prescribed in the International List (Fifth Revision 1938)\* operating from the current year 1940 in accordance with international agreement. The Detailed List is used in Tables 6, 7, 8, 9, 10, 11, 12, 15, 21, 21A, 22, 23, 25, the main divisions and lettered subdivisions being international while the numbered subdivisions are extensions adopted by the Registrar General. The divisions of the International Intermediate List are indicated by the italic numbers in brackets shown in col. 1 of Table 6. The Abridged List used for separate areas in Table 24 is a modification of the International Abridged List adopted by the Registrar General in consultation with the Ministry of Health and is extended by the Supplementary Abridged List in Table 24A. Particulars of the changes made at the Fifth Revision are given in Appendix B.

Coincident with the Classification revision, a change has been made in the manner of selecting the assigned cause where more than one cause is mentioned on the medical certificate, the choice now being in the main that inferred from the statement of the certifier instead of being determined by arbitrary rules of precedence (see pp xxxvi-xli of the Manual)\*.

The combined effect of the double revision is considerable and in view of this, the following steps have been carried out to provide continuity and comparability with past experience.

(a) 1939 The 1939 experience has been completely reclassified according to the 1940 procedure and the revised figures used wherever 1939 references appear in this volume. The complete reclassification was published as Appendix B in the 1939 volume.

(b) 1931-38 Similar reclassification was undertaken in respect of large sections of the deaths of the years 1936-1938 and from the dual classifications of these years and of 1939, conversion ratios were obtained; these have been applied to produce approximately comparable records for the years 1931 to 1938 wherever these appear in the present volume. The conversion ratios and details of their application are given in Appendix B.

**5. Death Rates**

The death rates for 1940 are derived from the experience of civilians only, and with the exception of Infant Mortality and Maternal Mortality rates are based upon civilian populations (see (2) above).

Infant Mortality and Maternal Mortality rates, conforming to the practice followed in previous years, are based upon the births registered in the period to which the deaths relate. Rates measured in this way however are imperfect in that no allowance is made for the circumstances (a) that the births registered may be different from the numbers occurring in any period (Sec. 6 below) or (b) that infant deaths relate partly to births which occurred prior to the death registration period. To convert the published 1940 rates (all causes) based on coterminous birth registrations to corrected rates based upon related births, the former should be multiplied by the following factors:—Infant Mortality: under 4 weeks 1.027; 4 weeks-3 months, 1.018; 3-6 months, 1.008; 6-9 months .994; 9-12 months, .987; total under 1 year, 1.017; Maternal Mortality, 1.028

\*See Manual of the International List of Causes of Death (Fifth Revision 1938) obtainable from H.M. Stationery Office, Kingsway, London, W.C.2. Price 3/6 net.

## 6. Births

The births recorded are those registered in the calendar year. In former peace years the average time lag between the occurrence and the registration of a birth was maintained at the fairly constant period of about a month and while there was little change in the birth rates, the numbers registered corresponded approximately to the number of occurrences. Since the outbreak of war and the introduction of food rationing the lag has progressively diminished with the result that the live birth registrations in recent periods have been in excess of the occurrences so that birth rates and infant mortality rates (see section 5) will tend to be overstated or understated respectively when based upon registrations. The ratio of occurrences to registrations in 1940 was 0.9719 in respect of live births and 1.0026 in the case of still births for the country as a whole.

In the classification of births by area in Table 17, the births have been assigned to the home address or area of permanent residence in all cases as in previous years. For the calculation of infant and maternal mortality a slightly different assignment was used following that adopted for the classification of the deaths (see (3) above).

## 7. Birth Rates

In the absence of estimates of total populations the birth rates of Table 17 have been calculated upon estimates of civilians only. For the country as a whole the ratio of estimated civilian population to total population is 0.9529 and this, when combined with the correction in (6) above yields a factor of 0.9261 by which the live birth-rates of Table 17 may be multiplied to produce rates approximately comparable with those of preceding years.

## 8. Changes in Boundaries

Areas in respect of which boundaries have not remained constant throughout the year are distinguished in Table 17 by printing symbols, \* denoting alteration, † new creation and § abolition. (See also Appendix A.)

Unless otherwise indicated, statistics of areas created or abolished refer only to the portion of the year of their existence, while statistics of areas whose boundaries have been altered are composite figures combining the "before change" and "after change" position for the respective periods involved. The population of each area as constituted after change will be found in Appendix A, the population shown in Column 2 of Table 17 being a constructed figure appropriate for use with the partial or mixed records of births and deaths of the current year.

## 9. Significance Indication

Rates based upon less than 20 births or deaths are distinguished by italic type as a warning to the user that the smallness of the experience may affect its significance.

## 10. Regions

The constitution of the Regional Divisions of England and Wales used throughout the volume is as follows:—

|  |   |   |   |
|--|---|---|---|
| <p><i>Greater London.</i><br/>The area coincident with the City of London and Metropolitan Police Districts — approximately 15 miles' radius from Charing Cross.</p> <p><i>South East.</i><br/>Bedfordshire.<br/>Berkshire.<br/>Buckinghamshire.<br/>Essex.<br/>Hertfordshire.<br/>Kent.<br/>London.<br/>Middlesex.<br/>Oxfordshire.<br/>Southampton<br/>Surrey.<br/>Sussex, East.<br/>" West.<br/>Wight, Isle of.</p> | <p><i>North I.</i><br/>Durham.<br/>Northumberland.</p> <p><i>North II.</i><br/>Cumberland.<br/>Westmorland.<br/>Yorkshire, E. \* The standardized death-rates are those which would have been recorded if the sex and age constitution of the population had been the same as in 1901. The rates for males and females are standardized for differences of age constitution in each sex, and also between the two sexes. See the Registrar-General's Decennial Supplement, 1921, Part III (pages xxxiii-xlii).

† For the years 1915-20 and from 3rd September, 1939, the mortality-rates are based upon civilians only, but, as in other years, the numbers of deaths include those of non-civilians registered in England and Wales.

‡ In addition to these numbers 265 deaths were registered which occurred in the Gresford Colliery disaster in 1934.

TABLE 3—continued.

| Year  | Deaths.  |          |          | Crude rates per 1,000 living. |        |          | Standardized rates per 1,000 living.* |        |          | Ratio of Standardized Male to Female Mortality, the latter taken as 1,000.* | Deaths of Infants under 1 year per 1,000 Live births. |             |               |
|-------|----------|----------|----------|-------------------------------|--------|----------|---------------------------------------|--------|----------|---|---|-------------|---------------|

TABLE 9.—DEATH-RATES PER MILLION LIVING FROM THE } England and Wales  
PRINCIPAL EPIDEMIC OR GENERAL DISEASES, 1851-1940

The rates for all years prior to 1939 are based on total deaths and population. Non-civilians are included up to 2nd September, 1939, but excluded thereafter. See explanatory notes on page v.

| Period.   | At All Ages (Standardized).               |  |                                  |  |                |                 |                 |                         |                                  | At Ages under 15 Years. |                     |                  |               |   |

TABLE 16. Suspended.

TABLE 17. POPULATION, BIRTHS, DEATHS, AND INFANT MORTALITY, 1940.

{ England and Wales, Regions, Counties, Boroughs, Urban Districts and Rural Districts.

See Explanatory notes on pages v.

The national and regional estimates of population were prepared on the basis of later data than were available when the county and district estimates were made. The first estimates exceed the latter by 102,000 in the aggregate.

TABLE 19. CIVILIAN DEATHS BY SEX AT EACH YEAR OF AGE } England and Wales.  
(WITH THE MARITAL CONDITION), 1940.

Included in this Table are 1,241 cases (710 Males and 531 Females) in which the age of deceased was not definitely stated; these have been allocated to particular ages in accordance with the best available information and with due regard to the circumstances and cause of death in each case.

The deaths of divorced men and women are included with the deaths of widowed.

See Explanatory notes on page v.

TABLE 21.—CAUSES OF DEATH AT DIFFERENT AGE-PERIODS, 1940 in England and Wales. Non-civilian deaths are excluded from this table but shown separately in Table 21A page 144.

The sequence of causes of death followed in this table is that of the full detailed International List of Causes of Death (Fifth revision, 1938). Separate columns are not devoted to those causes to which, as a rule, few deaths are assigned. In order, however, to make the record complete, the list numbers of such causes are printed as nearly as possible to the places where they would occur. The deaths, if any, from these causes are shown in footnotes in which the heavy-faced figures preceding the cause express the International List number, and the figures following it indicate the sex and age-group of the decedent, roman type for males and italic type for females. Thus 5, Undulant fever, 55, 65, 40, 70 denotes the deaths of two males in age-groups 55-60 and 65-70 and two females in age groups 40-45 and 70-75 are assigned to this cause. A dash (—) indicates that no deaths are assigned.

See Explanatory notes on page v.

TABLE 23.—DEATHS BY MONTH OF OCCURRENCE AND CAUSE, } { England and Wales.  
Jan.-Dec., 1940. (Non-civilian deaths are excluded).

NOTE.—(a) Totals for any period made up from this table will differ from the corresponding figures shown in other tables which are tabulated according to date of *registration*.

(b) Some of the cause headings in this table have been abbreviated and some sub-headings of minor significance are omitted. The full titles of the abbreviated headings will be found in Table 21.

See Explanatory notes on page v
